## Home power bank

It's almost Cyber Monday! See the best Cyber Monday deals our experts have found so far.

As a writer on the powering beat, I have endless options in the rotation. But the one I usually reach for when packing a bag for the day is the Belkin BoostCharge Plus 10K.

Though the BoostCharge Plus 10K can't light a cigarette (unless something has gone disastrously wrong), it is a multitasking tool: It can fast-charge a single device or charge up to three devices simultaneously at a slower pace.

It weighs just 8.4 ounces, or a little more than half a pound, about as much as a smartphone. Plus, its streamlined shape makes it comfortable to hold and easy to slip into a pocket or purse.

Despite its small size, it's super powerful. Its capacity is rated at 10,000 milliampere-hours (mAh), which means it can fully power up most smartphones up to three times on a single charge.

It also spares you from having to bring separate charging cables. The built-in Lightning cable can charge most iPhones and other Apple accessories, and the built-in USB-C cable lets you charge a wide variety of devices (including any model in the iPhone 15 lineup) at top speed. And unlike most built-in cables I've tried, these seamlessly slide in and out of their holsters, making them a cinch to use.

When it's time to recharge the power bank itself, you can use either the USB-C port or the built-in USB-C cable; both have fast-charging input and output capabilities. The power bank supports pass-through charging, too, so you can still charge a device or two while it's recharging.

Even if you don't normally carry (or even use) a power bank, you can easily get the hang of this one. A single button turns it on and off, and four small LEDs indicate how much battery life remains. It also powers down automatically when not connected to anything.

At this writing, the BoostCharge Plus 10K sells for about \$70, which makes it pricier than a lot of power banks. If you're not comfortable spending that much, you might prefer one of our other picks. For instance, the TravelCard Plus (\$40) has less battery life but is much smaller and lighter, the Scosche GoBat 10K (\$50) lacks built-in cables and has a chunkier shape but is still quite compact, and the ESR HaloLock Kickstand (\$35) charges wirelessly and includes a handy built-in stand for video calls and streaming, though it's somewhat impractical for non-MagSafe phones, since it neither charges on the go nor works as a kickstand without the magnet feature.

Also, the BoostCharge Plus 10K doesn't come with a wall charger. But if you're buying a power bank, you likely already have a compatible wall charger (or several) at home, and they're fairly inexpensive if you need to pick one up. Personally, I prefer it this way, since it helps me cut down on my e-waste.

Another potential downside of the BoostCharge Plus 10K is that it comes only in black. So if you haven't embraced the soft goth aesthetic, it might not be for you.
