As subject matter experts, we provide only objective information. We design every article to provide you with deeply-researched, factual, useful information so that you can make informed home electrification and financial decisions. We have:

Sourced the majority of our data from hundreds of thousands of quotes through our own marketplace.

Incorporated third-party data and information from primary sources, government agencies, educational institutions, peer-reviewed research, or well-researched nonprofit organizations.

Built our own database and rating system for solar equipment, including solar panels, inverters, and batteries.

We won't charge you anything to get quotes through our marketplace. Instead, installers and other service providers pay us a small fee to participate after we vet them for reliability and suitability. To learn more, read about how we make money, our Dispute Resolution Service, and our Editorial Guidelines.

As more and more states commit to clean energy targets or emission reduction goals, there's an entirely new category of products dedicated to providing you with more control over how and when you use electricity. Once more of our appliances, and cars become electrified, it will be important for you to have improved insight into your energy usage and a way to take control of it. We'll cover what energy management is and why it's so important for meeting clean energy and emission reduction targets.
