Home wind turbines for sale

Home & Electricity

Are you looking for a way to save money and help the environment? One of the best options is a home wind turbine. These small products harness the power of the wind to provide electricity to the home. On top of that, this power can be stored in the batteries for later use.

As you already know, not all wind turbines are made the same. Our team created the list of the best home wind turbines on the market with the PIKASOLA 400W Wind Turbine Generator AC 12Volt as our Editor's Choice to help you with your decision. We used several factors to score these products. First, the max power output and voltage are important for those who need better efficiency. The required wind speed to generate power is another huge factor that you must keep in mind when using a product in various areas. Next, the number of blades and their materials are both crucial since they can affect performance. Finally, we evaluated each turbine's dimensions and weight to factor in the space needed for installation. Do you want to learn more? Let's go!

More features: efficient and compact AC generator, integrated voltage regulator with auto-off, rotating body, comes with a controller, nose cone, screws, and nuts, anemometer

Our Editor's Choice, the Pikasola 400W wind turbine kit, boasts high efficiency, high-quality materials, and easy installation.

This wind turbine works best in spots where there are high wind and no large obstacles to block wind flow. It provides excellent energy generation even with wind speeds as low as 12 mph. The turbine comes with a compact AC generator and can produce up to 400W of power. The voltage regulator comes with an auto-off switch to prevent overloads and save power when the wind is not blowing.

The low wind needed to operate this wind turbine is great for people trying to live off-grid or camping. With stronger winds, the wind turbine can produce more power for your home or trailer. However, the manufacturer recommends not to use this turbine in areas that have turbulent wind conditions often.

More features: comes with controller, IP67 waterproof rating, excellent heat dissipation, overcharge protection, auto brake function

The Marsrock wind turbine comes with a controller and several safety features. The unit has excellent heat dissipation to keep it from overheating, as well as overcharge protection and an auto-brake function. Masts are not included.

Home wind turbines for sale

More features: working temperature is $-40^{\circ}\text{C} \sim 80^{\circ}\text{C}$, safe for wind speeds up to 111 mph

The Dyna-Living Wind Turbine Generator is one of the best options for the customers on a budget. It is small and lightweight at only 15lbs. It works at low speeds of 4.47 mph and can generate up to 400 watts at 29 mph.

This home wind turbine can be mounted in the included 1.5-inch schedule 40 pole and is great for homes, cabin, trailers, worksites, or wherever power grids are unavailable or too costly. Tested safe for winds up to 111 mph, this wind turbine can handle most weather conditions.
