Hospital energy storage cape verde

The Santiago Pumped Storage Project, which will be located in Chã das Caldeiras, in the municipality of Ribeira Grande de Santiago and will cost around 60 million euros, promises to significantly increase energy storage capacity, thus making it possible to increase the country's electricity production capacity. It is a project with 20 megawatts (MW) of power and 160 megawatts per hour (MWh) of energy storage capacity.

This increase, according to Prime Minister Ulisses Correia e Silva, will help achieve the government's goal of more than 50% of electricity production from renewable energy by 2030 and approaching 100% by 2040.

During the presentation of the project, Cape Verde's National Director for Industry, Trade and Energy, Rito Pereira, announced that the energy storage centre is scheduled to be operational by 2030, with the aim of injecting 7% of renewable energy into the national public grid and 18% into that of the island of Santiago.

Avenida do Brasil, 155 A, 1700-067, Lisboa, Portugal

The Republic of Cabo Verde is an archipelago and island country of West Africa in the central Atlantic Ocean, consisting of ten volcanic islands with a combined land area of about 4,033 square kilometres.
