Learn how to calculate the number of solar panels you need for your home based on your electricity usage, sun exposure, and panel output. Use the solar calculator to ...

The simple answer is: Yes, you can power a house entirely on solar power. To meet your energy ends, you'll want to factor in a handful of variables: the size, pitch and orientation of your roof, the size of panels you'd like to install, the amount of shade, output efficiency and wattage. Plus, you want to figure out current and future usage needs and whether you want your entire home to be powered on solar energy or just part of it.

Yes, solar panels can help power your air conditioner. However, AC units consume large amounts of electricity to run. This can affect the amount of solar panels you'll need to power your home.

It's not just about wattage; installation costs, panel performance, location and usage needs also matter. While a professional installer can handle the calculations, this guide will help you estimate your solar panel needs and understand the factors that influence them.

Interested in understanding the impact solar can have on your home? Enter some basic information below, and we'll instantly provide a free estimate of your energy savings.

The number of solar panels you'll need depends on a variety of factors and is going to vary drastically by household. A few factors affecting the amount of panels you'll need are:
