Large capacity all-in-one hybrid inverter for commercial application, supporting up to 600 kW system capacity

Features:

The system features an "all-in-one" design providing customizable microgrid and energy storage solutions for remote locations. It enables harnessing of local renewable resources for power generation while giving users full control over these distributed energy assets. With robust integration tailored for isolated communities and eco-sensitive areas, the solution delivers reliable and sustainable energy access powered by the sun, wind and other indigenous resources. The flexible microgrids boost energy independence and build resilient green economies for off-grid regions.

"Integrated and all-in-one" design concept.

Advanced technologies like "intelligent risk control" and "safe firefighting" fully integrated.

A safe, reliable, affordable, high-quality, user-friendly, highly integrated. And conveniently transportable smart mobile energy storage system.

Real-time monitoring and diagnosis, multi-level electrical protection, multiple fire protection measures, system-level physical isolation.

Digitalization of battery cells, full lifecycle data management, real-time status monitoring.

Air cooling design, industry-leading standardized heat dissipation cabinet, precise and efficient temperature control, energy consumption control superior to competitors.

Support for parallel connection, facilitating system expansion; cluster-level management eliminating parallel connection losses.
