Industrial microgrids georgia

Power dependency is growing rapidly

The power grid continues to age and is underinvested

Severe weather events are increasing

A microgrid can mitigate the risk of power outages

SolMicroGrid is a differentiated developer and operator of solar-enabled microgrid systems, providing Energy as a Service (EaaS) to commercial and industrial customers.

We offer scalable, repeatable, and customizable energy resiliency and efficiency, while lowering bills and reducing carbon emissions. Our EaaS solution reduces operating expenses without the need for customer capital investment.

SolMicroGrid is a Morgan Stanley Energy Partners portfolio company.

We offer Energy as a Service which provides several benefits to our customers ranging from cost savings to sustainability and energy security.

Microgrids allow businesses to generate their own electricity which can result in significant operating expense savings.

The "Energy as a Service" model means that customers only pay for the power and services they use, such as on-site generation, battery storage, and resiliency with no capital expenditure typically required.

Microgrids enable businesses to diversify energy sources by adding solar to their energy mix which can reduce their carbon footprint.

In the event of a power outage from an aging power grid or severe weather, a microgrid can continue to provide power without interrupting business operations.
