

# It successfully used alternative energy resources

It successfully used alternative energy resources

Going forward, innovations in renewable energy storage and grid integration will open new doors for ways to make use of green power, while artificial intelligence and machine learning aid in optimizing energy use.

The top countries using renewable energy come mostly from western Europe, and use sustainable energy sources including wind, solar, nuclear, and hydro.

Renewable energy has grown exponentially over the past two decades thanks to government policy and falling prices, far faster than many experts expected. Today, building new solar and onshore wind power on average costs around 40% less than coal or gas power.

CNN spoke with energy transition experts about the most reliable energy sources - and their challenges - to replace coal, oil and gas and halt the climate crisis.

Renewable energy technologies have come a long way in recent years, with new and innovative solutions constantly emerging. In this article, we'll look at eight of the most exciting and ...

As the global energy transition continues to develop, which countries are generating the highest percentage of the renewable energy necessary for sustainability progress?

The countries at the top of our list can somewhat attribute their high percentages in renewable energy generation to their abundant natural resources including Iceland's geothermal energy potential, Norway's vast hydroelectric power capacity, and Denmark's wind power generation.

Many governments are acknowledging the benefits of increased sustainable energy production, supporting advancements in technology, increasing public awareness and introducing policies in support of reducing carbon emissions through energy production.

As countries continue to invest in renewable infrastructure and explore innovative solutions, the proportion of electricity generated from renewable sources is expected to increase further in the coming years.

Renewable energy generation: 33.02%

Alongside being a leader in electric public transport, Columbia is also one of the biggest hydroelectricity users in the world. Enel is the largest power generation company in Colombia, providing sustainable energy — including approximately 300 solar panels capable of generating enough energy to cover the monthly demand of approximately 753 households.

## It successfully used alternative energy resources

Renewable energy generation: 34.61%
