We work with a panel of solar experts to create unbiased reviews that empower you to make the right choice for your home. No other solar site has covered renewables as long as us, which means we have more data and insider information than other sites. Our rankings are never affected by revenue or partnerships.

JA Solar Holdings is based in Shanghai, China, and it manufactures solar panels and a variety of solar-related materials for residential and commercial applications. JA Solar is considered a budget brand, but among the different affordable panel manufacturers, JA Solar delivers relatively high quality and high efficiency ratings for boosted performance and savings.

Overall, JA Solar makes great panels for homeowners on a budget. The price per watt is considerably lower than you'd find from most other manufacturers, but among other affordable brands, the efficiency rating and performance specifications are above-average. For the cost, JA panels deliver outstanding value.

With that being said, we more commonly recommend higher-quality, higher-efficiency brands, like REC, Moxon, Trina and QCells. These other brands usually have superior warranty coverage and better durability, so they will save you more in energy costs in the long run in many cases.

In the following sections, we'll take a look at each solar panel option JA Solar manufactures and explain which we recommend for different applications. The company manufactures two lines of panels -- DeepBlue 3.0 and DeepBlue 4.0x -- and we'll discuss the individual products within each line below.

The DeepBlue 3.0 product line from JA Solar is the more affordable of the two, meaning it's the best option if you're looking to keep your installation prices as low as possible. This line of products includes three distinctive subcategories: DeepBlue 3.0 Light, DeepBlue 3.0 and DeepBlue 3.0 Pro.

The DeepBlue 3.0 Light line of panels from JA Solar are the smallest panels of the bunch and have the lowest wattage per panel, coming in between 380 and 415 watts. Generally speaking, JA Solar panels are larger than the average panels available from other manufacturers, but this product line is in line with the average.

These panels only come with a 12-year product warranty and a 25-year production warranty.

Ja solar panel warranty

The DeepBlue 3.0 panel lineup is meant for homeowners who aren't necessarily looking to keep costs as low as possible and instead want to ensure their system performs better and produces more energy.
