

Ja solar panels uk review

Ja solar panels uk review

• JA solar panels range from 20.7% to 22.5% efficiency

• They have a warranty of 12 years, less than the industry average of 15 years

• The power output of JA solar panels ranges from 405 watts to 625 watts

Solar panels are a great investment. They can save you money on your energy bills, and help lower your carbon footprint. But with the average cost of solar panels at £7,026 for a three-bedroom house, you want to make sure you're getting your money's worth.

If you're reading this article, you've probably already heard of JA solar panels, and you're wondering if they're worth buying. We'll help you decide this by comparing their output, efficiency, and warranty period to industry averages.

Tired of comparing different solar panels? We can make it easier for you. Just fill in our short form with a few details about your house, and we'll pass them to certified solar panel installers. They'll get in touch and offer you their best prices.

JA Solar is a Chinese company that manufactures solar panels and solar batteries, as well as solar panel-adjacent materials such as frames and junction boxes.

It's a 'Tier 1' manufacturer, which means it's an established and trusted solar panel business, with its own production facilities.

It's also one of the largest solar panel manufacturers in the world, regularly featuring in the top 10 list.

JA Solar has two types of solar panels: ones with 'n-type' solar cells, and ones with 'p-type' cells. The difference between these two is that n-type cells are generally more efficient than standard p-type cells – up to 3.9% more, according to JA.

However, n-type cells are also more expensive than p-type cells, and are less widely available. This might be why only five out of the 18 solar panels currently in JA Solar's range have n-type cells.

The power output of JA solar panels ranges from 405 watts (W) to 625 W. They weigh between 19.5 kilograms (kg) and 34.6 kg, and measure between 19.5 and 27.9 square metres.
