

Kent county solar panels

Kent county solar panels

Renewable developer Clearway Energy Group has completed a 452-megawatt (MW) solar farm in West Texas - and it's huge.

Texas Solar Nova will generate enough electricity to power over 190,000 homes annually. It's got an offtake agreement with telecoms giant Verizon, and agreements with auto component maker Toyota Boshoku and Swedish bearing and seal maker SKF to purchase renewable energy certificates (RECs). Both Toyota Boshoku and SKF have 12-year agreements for RECs.

Verizon is aiming to source the equivalent of 50% of its total annual electricity consumption with renewable energy by 2025, and achieve net zero by 2035.

The Solar Energy Industries Association (SEIA) ranks Texas second in the US for the amount of solar installed (MW), and it's expected to bump California out of the No 1 spot in the next five years. However, despite being a solar and wind leader, it still produces much more gas and oil.

If you live in an area that has frequent natural disaster events, and are interested in making your home more resilient to power outages, consider going solar and adding a battery storage system. To make sure you find a trusted, reliable solar installer near you that offers competitive pricing, check out EnergySage, a free service that makes it easy for you to go solar. They have hundreds of pre-vetted solar installers competing for your business, ensuring you get high quality solutions and save 20-30% compared to going it alone. Plus, it's free to use and you won't get sales calls until you select an installer and share your phone number with them.

Your personalized solar quotes are easy to compare online and you'll get access to unbiased Energy Advisers to help you every step of the way. Get started here. -ad*

Over a quarter of the carbon emissions from Kent and Medway come from the energy used in our homes. We must act now to make our homes more sustainable. Renewable technology, such as solar panels, is especially important to protect households from fluctuating energy prices, especially those with high electricity consumption, for example from charging electric vehicles.

Kent county solar panels

Solar Together Kent is a solar panel and battery storage group-purchase scheme. It enables householders and small businesses to install solar panels on their homes and businesses at a competitive price.

Solar panels can help you save money on energy bills, as well as reduce your carbon footprint. You can also choose to install battery storage, so electricity generated by the solar panels can be used in your home or via a personal electric vehicle charging point.

Any homeowner, landlord or small business in Kent can register. Applications are limited to 50 solar panels per property.
