The Sudan Power Market size is estimated at 4.36 gigawatt in 2024, and is expected to reach 4.47 gigawatt by 2029, growing at a CAGR of 0.49% during the forecast period (2024-2029).

The market was negatively impacted by the outbreak of COVID-19. Currently, the market has reached pre-pandemic levels.

Power generation is electricity generated through various primary sources such as coal, hydro, solar, and thermal. In utilities, it is a step before its delivery to end users. Then the process is followed by transmission and distribution. Under this, the power generated is distributed via high-voltage lines (transmission lines) and low-voltage lines (distribution lines) as per the requirement of the end user.

Khartoum electricity market trends

The Sudanese power market is segmented by power generation from sources and power transmission and distribution (T&D). By power generation from sources, the market is segmented into thermal power, hydropower, non-hydro renewables, and nuclear sources and power transmission and distribution (T&D). For power transmission and distribution (T&D), only qualitative analysis is provided. For each segment, the market sizing and forecasts have been done based on installed capacity in megawatts (MW).
