With lithium-ion batteries increasing in popularity, sealed lead-acid batteries are ...

Apollo Scooters are a modern, high quality brand that manufacturers superb ...

Electric scooter batteries are vital, affecting speed, range, and cost efficiency. This guide ensures responsible ownership and longevity.

Most electric scooters today use lithium-ion batteries, which offer significant advantages over other types of electric batteries:

However, lithium-ion batteries also have several disadvantages you need to be aware of:

There are several types of lithium-ion batteries, depending on the active material that’s bonded with the Lithium atom:

Some models of electric scooters, especially older ones, have different types of batteries, usually lead-acid or nickel-metal-hydride batteries.

Lithium-ion batteries are ideal for electric scooters due to their high energy density, lack of memory effect, and ease of maintenance.

Also, the battery manufacturer matters.

My electric scooter came with a generic Chinese battery that worked well initially, but after a few months, its performance significantly declined, affecting the range and top speed.

To enhance my daily commute, I upgraded to an LG battery, resulting in remarkable improvements.
