After new testing, EcoFlow's River 2 Pro and Delta Max are our top and upgrade picks, respectively, and the Jackery Explorer 300 is best for short-term use.

It's roughly the same size and weight as a toaster oven, and it provides a steady stream of power without the noise or exhaust of a gas-powered portable generator.

After researching and testing dozens of portable power stations over the past seven years, we found that the River 2 Pro easily stands out from the competition. It offers lots of power for its size and price, and it has a wide array of outlets and charging ports, an easy-to-use interface, and a relatively rugged exterior.

Each model must have a pure sine-wave inverter, so it can safely run a motored appliance or a critical device like a CPAP machine.

Each model must weigh 50 pounds or less, so an average adult can load it in and out of a car or tote it around a campsite.

The EcoFlow River 2 Pro is light enough for the average adult to lift and carry safely, yet in our tests it managed to run even the most power-hungry appliances. Offering lots of output and capacity for its size, it's suitable for keeping most devices, such as a laptop or a CPAP machine, running all day or all night long.

We love the easy-to-read screen, which shows input and output wattage and how much power remains in reserve.

It has four AC outlets, a USB-C port, and three USB-A ports, so you can charge a variety of gadgets from laptops to cameras to GPS units. It also comes with cables to recharge itself from a wall outlet, car power socket, or solar panel, and it's backed by a five-year warranty.

It barely falls within our maximum weight limit, and its two-year warranty is shorter than that of our top pick. But with more capacity than our other picks, it can keep your gear running even longer on a camping trip or during a power outage, and with its higher output you can plug in more power-hungry appliances.

Plus, it has six AC outlets, two USB-C ports, and four USB-A ports to charge more devices simultaneously.
