Unscheduled power outages have been repeatedly happening in Majuro, and power rationing went into effect late last week as MEC power plant staff struggled to repair one of the large engines that anchors power delivery to the capital atoll.

MEC scheduled an outage for the power plant to Laura area for powers plant maintenance Thursday December 28. But then a few days before this date postponed it to the following week Thursday. On December 28, however, power was unexpectedly shut off in the morning to the Laura area and stayed off until mid-afternoon because of "a sudden emergency issue at the plant," according to MEC.

Friday December 29, power was unexpectedly turned off to a section of Delap due to a malfunctioning transformer near the Pacific Regional Bank. Power was off most of the day in the downtown area.

This was an indication of the problems surrounding continued operation of one of the two large Deutz engines at MEC's power plant.

"Due to a mechanical issue with the large Deutz engine, we may not have enough power to feed the entire island tonight, and power may be off in some areas of Majuro," MEC stated Thursday January 4 on its Facebook page. MEC advised businesses "to run their own generators tonight."
