Non-domestic account holder

The solar PV system will prioritize utilizing the energy it generates, with any surplus being permitted for export back to the TNB grid as credit. This credit will then be applied to offset the electricity bill at the designated offset rate.

The solar PV system's generated energy is solely for personal consumption; surplus energy cannot be exported to the TNB grid. However, it can be stored using battery storage technology. There are no provisions for offsetting or rolling over any excess energy generated.

Battery Energy Storage With self-consumption setup, businesses can add battery energy storage to store surplus energy generated for later use. Otherwise the surplus energy will just go to waste.

Switching to solar energy can be a game-changer for businesses, not just in terms of sustainability but also financially. With solar power, businesses can significantly reduce their energy bills and even generate additional revenue through incentives like net metering. The savings potential is immense, offering a long-term solution that stabilizes energy costs and enhances profitability. Curious to see how much your business could save with solar?

Try our Solar NEM Calculator below and take the first step towards a brighter, more sustainable future.
