All articles published by MDPI are made immediately available worldwide under an open access license. No special permission is required to reuse all or part of the article published by MDPI, including figures and tables. For articles published under an open access Creative Common CC BY license, any part of the article may be reused without permission provided that the original article is clearly cited. For more information, please refer to <https://>

Feature papers represent the most advanced research with significant potential for high impact in the field. A Feature Paper should be a substantial original Article that involves several techniques or approaches, provides an outlook for future research directions and describes possible research applications.

Feature papers are submitted upon individual invitation or recommendation by the scientific editors and must receive positive feedback from the reviewers.

Editor's Choice articles are based on recommendations by the scientific editors of MDPI journals from around the world. Editors select a small number of articles recently published in the journal that they believe will be particularly interesting to readers, or important in the respective research area. The aim is to provide a snapshot of some of the most exciting work published in the various research areas of the journal.

The OPDM project recently wrapped up with a final meeting to review its findings and implications. In essence, the project aimed to optimize and design energy systems to provide clean, reliable, and cost-effective solutions. Specifically, it focused on determining the optimal sizing for hybrid renewable energy systems in remote areas. This involved accounting for uncertainties in generation and load demand, as well as variations in wind speed and solar irradiation. Advanced optimization techniques were employed to maximize economic, technical, and environmental benefits.
