

Mini wind turbine for house

Mini wind turbine for house

The phrase "wind power" likely conjures images of massive spinning blades. But some companies now make micro wind turbines - tiny devices that can be installed at homes, businesses, and public parks.

The microturbines are installed in groups - either on the roof of a building or as part of what New World Wind calls a wind tree or wind bush.

These sculptural installations mimic real trees and bushes. And their trunks, branches, and leaf colors can be customized to blend in with the surroundings or to draw attention. For example, a wind tree near Wichita State University in Kansas has leaves in black and yellow - the school's colors.

Krief: "We can produce electricity 24 hours by day, seven days by week."

So micro wind turbines offer another way to produce clean energy right where it's needed.
