Most reliable solar batteries

Below are our top six solar batteries:

The best of EcoWatch right in your inbox. Sign up for our email newsletter!

In this review of the best solar batteries, you'll learn:

We work with a panel of solar experts to create unbiased reviews that empower you to make the right choice for your home. No other site has covered renewables as long as us, which means we have more data and insider information than other sites.

Find the best quotes for solar battery installation.

Note: In July 2024, SunPower notified dealers it would be halting all new shipments and project installations. The company also noted it would "no longer be supporting new Leases and PPA sales nor new project installations of these financing options."

If you're looking for improved solar savings and blackout protection for your home, then adding a solar battery to your solar array is a great option. Most people know about the Tesla Powerwall, and while it's a great product, it doesn't mean it's the best solar battery out there.

In this guide, we'll be discussing what we believe are the top five best solar battery manufacturers to choose from for home solar power systems. These include the following:

We'll explain why each is a great option for these purposes and help you decide which is the best one for your needs below. You can click on the drop-down menus under each battery option for more detailed information.

Tesla is a leader in the industry in terms of technology, and the different Powerwall batteries are a clear reason why. The energy storage systems from Tesla are sleek, perform better than most other options on the market and come with some impressive technology that makes them super convenient to use. The high demand means the waitlist for products is quite long, but we feel they're still some of the best options available.

We recommend Tesla solar batteries for homeowners who want the best of the best and don't mind waiting a few months for supply to catch up with demand.

There are so many positive things to say about Tesla's solar batteries. First off, they're expensive, but the cost per kilowatt-hour (kWh) is well below the industry average at just \$851. In fact, they're some of the most affordable backup batteries when taking capacity into account.
