

## Northern cyprus electric vehicle adoption

The second Policy Axis seeks to make a significant contribution to green transition and environmental sustainability, through the achievement of national targets for climate neutrality, energy efficiency and renewable energy sources. It promotes reforms in the fields of climate and energy, sustainable transport, water resources management and the wider environment.

This axis is also the most important in terms of the overall contribution of the Plan to the climate targets, which reaches 41% of the total budget of the Plan, with actions over EUR500 million that are diffused in almost all policy areas.

The Scheme concerns the sponsorship for the purchase of electric vehicles or the purchase of an electric bicycle, in the form of an ‘ecological reward’; for the purchase of vehicles with zero CO<sub>2</sub> emissions (pure electric vehicles).

A detailed description is included in the Scheme Guide.

EUR1.000 – EUR100.000

Support scheme for the installation/expansion of photovoltaic systems and the installation of smart meters in homes for the plugging-in and charging of electric or hybrid vehicles

The Ministry of Energy, Commerce and Industry (MECI) and the Management Committee of the Renewable Energy Sources (RES) and Energy Saving (ES) Fund announced on 26/10/2020 the adoption by the Council of Ministers of a proposal for the implementation of a new subsidy scheme for the promotion of electric vehicles.

This project, the total expenditure of which may cover applications of up to EUR 1 million, will be completed by the end of the year. It will provide financial incentives for the installation/extension of a photovoltaic system (PV) and/or charging point, and a smart electricity meter in existing dwellings, with a view to charging an electric vehicle or plug-in hybrid vehicle.

The RES and ES Fund will accept applications from tomorrow 27/10/2020. The plan will remain in force until 20/12/2021 or until the available funds run out.
