

Ovo energy solar panel storage

Ovo energy solar panel storage

I am looking at the solar panel/battery combination, and wondered about using ...

OVO Energy Ltd.2009,Bristol,OVO Energy?OVO Energy???

I am looking at the solar panel/battery combination, and wondered about using Economy 7 overnight to top up the batteries.

What concerns me is that if the battery is filled 100% at night, there will be no space left to store any free power when the sun comes up. What I was hoping was that today's systems would work out how much spare capacity to leave in the battery overnight to prevent that from happening. Obviously that calculation would vary by season.

Has anyone any information about this please? I have yet to find anything online.

Really interested to hear your take!

Our current tariff is fixed for another year so we haven't got economy 7 but definitely interested in moving to this when this ends.

My plan would be - Nov-Feb fully charge battery overnight. Rest of the year, charge battery from solar.

Our 5KWh battery has dropped our electricity usage by about 60% between march and October, a pretty incredible impact especially with rising prices.

Hi, this can be done by seasonal power plans with SolarEdge systems but I am not sure how good the next day forecasting actually works.

To be honest with a good solar system the PV generation is very predictable and you can make battery energy plans to suit.

I have just ordered (but am still waiting) for their new Energy Bank 10kW DC battery to add to my existing solar system. The software looks very flexible and can prioritise battery charge and discharge to maximise solar self consumption and top up at cheaper rates. When I have it (sometime in June hopefully) I will do a review / case study of my own system with lots of geeky data for people to look at.
