In a world where sustainable energy solutions are the key to a brighter future, Pakistan stands at a pivotal juncture. Faced with escalating energy demands amidst rapid urbanisation and economic growth, the need for change has never been more compelling. With development cooperation history of over 60 years, one of the priority areas of the Pakistan-German cooperation is to realise a "Just Energy Transition" in Pakistan.

With the support of the German Federal Foreign Office (AA), GIZ Pakistan through the Pakistan-German Renewable Energy Forum (PGREF) has partnered with the Benchmark School in Islamabad to launch a pilot "Solar Schools" project in Pakistan. This project aims to serve as a role model for other schools and communities to build upon as we move towards a clean, green, and sustainable energy future.

The Solar Schools project, launched in collaboration with the Goethe Institute, has integrated the Benchmark School into the wider Solar Schools network. Under this project, a solar system has been installed at the school, which is tailored for educational purposes, and is geared towards raising awareness on renewable energy and climate change among the Pakistani youth.
