## Personal wind turbine

As subject matter experts, we provide only objective information. We design every article to provide you with deeply-researched, factual, useful information so that you can make informed home electrification and financial decisions. We have:

Sourced the majority of our data from hundreds of thousands of quotes through our own marketplace.

Incorporated third-party data and information from primary sources, government agencies, educational institutions, peer-reviewed research, or well-researched nonprofit organizations.

Built our own database and rating system for solar equipment, including solar panels, inverters, and batteries.

We won't charge you anything to get quotes through our marketplace. Instead, installers and other service providers pay us a small fee to participate after we vet them for reliability and suitability. To learn more, read about how we make money, our Dispute Resolution Service, and our Editorial Guidelines.

Let's make one thing clear right from the outset: Residential wind power is not for everybody. It's not even for many people. Small, residential wind is a decidedly niche market, limited not only by the forces of geography and land use but also the availability of affordable solar power.

Don't just take our word for it. Even those who have built careers, expertise, and livelihoods around wind power are the first to warn that it's probably not the best option for most households.

"Quite honestly, I talk more people out of wind power than I talk into it," said Michael Soriano, director of sales and marketing at Bergey Windpower Co., the top U.S. manufacturer of small wind systems.

"It's telling that I have solar panels on my roof but don't have wind turbines in my yard," said Matthew Lackner, director of the Wind Energy Center at the University of Massachusetts Amherst.

However, small wind can be a viable option to power a home under certain circumstances. In limited cases, it may even be economically preferable to solar power. And even when it's not, some people just really like the idea of a big wind turbine spinning on their property.

"We've seen several times that people want to buy a turbine just because it's a turbine. They want the 80-foot tower," said Bruce Hatchett, owner of California-based turbine installer Energy Options. "They want to be different or stand out, and that will do it."

Residential wind is quite rare, because it only has a chance to work at properties that meet basic conditions. In

short, the property must be windy, it should be rural, and it ought to use a lot of power.
