

## Poland demand response

In 2022, the implementation of the capacity market processes began with the general certification, conducted between January 3 and March 11. Participation in the general certification is mandatory for all existing physical generating units with a gross generating capacity of not less than 2MW, and compliance with this obligation is monitored by the President of ERO. Participation of scheduled physical generating units, physical demand side response units and scheduled demand side response units is optional, but is a prerequisite for subsequent participation in auction. A unit which has successfully completed the general certification process is entered into the register.

For the 2022 general certification, applicants submitted 1412 applications for entry into the register. A total of 1,379 units were successfully verified and subsequently entered into the register, including 1,144 physical generating units and 235 demand side response units. The summary of the 2022 general certification is presented in Tab. 1.

Existing physical generating units

Scheduled physical generating units

Physical demand side response units

Scheduled demand side response units

Tab. 1. Number and net available capacity of units entered into the register as a result of general certification in 2022.

The following charts show information on the number of physical generating units entered into the register in the 2022 general certification year, by primary energy source used.

Within 14 days of completion of the general certification, PSE submitted a detailed report summarising the general certification to the Minister responsible for energy and to the President of ERO. Furthermore, within 28 days of the completion of the general certification, PSE prepared a proposal for the parameters of the main auction for the delivery year 2027 and the parameters of the supplementary auctions for individual quarters of the delivery year 2024, and also submitted it to the President of ERO and the Minister responsible for energy.
