## Port louis energy storage investment

Our mission is to build trust and accompany our customers in their energy journey by delivering the right solutions with an outstanding quality of service.

We are committed to designing, constructing, and financing the generation of energy through the latest technology in solar, waste-to-energy, hydro, wind and water purification through renewable energy-driven technologies.

Where required, we strive to design the optimal combination of renewable and non-renewable generation like diesel or gas generators as well as energy storage systems.

We provide expert energy auditing services through surveys, monitoring, and measurement to establish usage patterns and to identify integrations based on the individual profile created. These integrations are focused on energy optimization and the reduction of wastage. Our solutions include new, efficient, and improved energy assets, monitoring and alarm systems, as well as creative and flexible financial solutions to facilitate these integrations.

Together with our partners, we provide individual and commercial infrastructural solutions to the growing electrical mobility industry. We provide these solutions as a turnkey installation or in financed forms like pay-as-you charge.

We have partnered with global leaders to provide waste-to-energy solutions to the different divisions within our group. We have the expertise to provide advice and design optimised waste-to-value solutions for our clients. We also facilitate the manufacture and financing of these projects.

Join us for 100% renewable electricity, carbon neutral gas and the power to make a difference.

IBL Energy Holdings Ltd (IBL Energy), a wholly-owned subsidiary of the IBL Group, the largest...

In this engaging podcast episode, produced in collaboration with Prism Chambers, hosts Johanne...

The cluster represents IBL's investments in the vertically integrated Mauritian tuna value chain. Being a considerable source of revenue for the group, as well as an important forex earner for the country, IBL Seafood will soon be converting its effluent into energy through Energie des Mascareignes, making its tuna operations the island's first zero-waste industry from the fish caught to the final co-products, thus contributing to IBL's sustainability objectives. Marine Biotechnology Products C?te d'Ivoire is part of the Cluster's international expansion.
