With over four decades of expertise, Ballard delivers efficient and sustainable power solutions for automotive, maritime, rail, and backup power applications, shaping a cleaner future.

At Ballard, we're driving the transition to a cleaner, more sustainable future. From transportation to industrial applications, our advanced fuel cell solutions are paving the way for progress. Join us in powering change.

Ballard's technology is proven over 200 million km on the road

Technology expertise and innovation to lower product lifecycle cost

End-to-end commitment to customer satisfaction and zero-emission operations

Our customers' successes are proof of our technology, validation of our product performance and testimony of our delivered promise. Thanks to our customers, our fuel cells contribute to reducing GHG emissions and air pollution every day.

We are committed to zero-emission power systems at scale, from trucks and buses to trains, ships and stationary power systems. We have the experience, the expertise, the product portfolio and the support network you need.

Benefitting from our vertical integration - ranging from Membrane Electrode Assembly (MEA), bipolar plates and stack design to complete system integration - Ballard's fuel cell power products deliver proven durability, reliability, and high power density with the lowest total cost of ownership. Explore our fuel cell products.

From 45kW to 360kW net power, Ballard's heavy-duty fuel cell modules offer flexible and reliable solutions for your transportation and power generation needs. Powered by Ballard's unique PEM fuel cell stacks, our modules are designed to meet the mechanical, electrical and environmental requirements of the most demanding applications.

Fuel cell electric buses are the only zero-emission technology that can directly replace diesel bus fleets, offering the same route flexibility, fast refueling, and uncompromised performance in challenging climates and environments. Hydrogen, as a low-carbon fuel, provides a scalable and efficient refueling solution for bus
