The entire world is now moving towards cleaner sources of energy. More and more businesses are ditching fossil-based energy for renewable energy sources, brought about by the need to reduce the impact of climate change.

Finally, let us start the countdown of the best energy storage stocks to consider. From our research and hours of data analysis, we have come up with the following top energy companies:

Tesla may be known for its high-end vehicles, including its namesake electric cars. But it comes as the first energy storage stock on this list. Tesla is one of the biggest battery manufacturers globally – which may come as a bit of a surprise until you remember all those cars need batteries.

Tesla relies on solar power to provide electricity to its many production facilities. It also uses rechargeable lithium-ion batteries to store excess solar energy and sell to homeowners and businesses.

Tesla is mainly known in the energy industry for its Megapack product. This is a high-capacity rechargeable lithium-ion battery energy storage device for power generation facilities.

Megapack is the revolutionary product that brought Tesla to the limelight. The demand for Tesla's Megapack product is rising exponentially, prompting the company to construct a new facility. This new plant only specializes in manufacturing Megapack to meet the demands.

Megapack is not Tesla's only energy storage product but is by far the most successful. Tesla warrants its position as the best energy storage stock.

NextEra Energy is one of the big names to mention whenever you discuss clean energy. It is the largest operator of electric utilities in the United States. Florida & Light and NextEra Energy Resources are part of its family.

Overall, NextEra is one of the world's leading renewable energy producers of solar and wind. It also has remarkable achievements in battery storage.

NextEra manages a vast network of wind, solar, and battery storage. These are all projected to expand more in

Publicly traded energy storage companies

the coming years. We expect to see these high investments to see the company grow to achieve its short and long-term goals.

The investment in NextEra will ensure continuous growth in dividends, as has already been seen this year. It is one of the fastest-growing energy storage stocks with a 10% growth figure, which is only expected to continue climbing in the coming years.
