ZDNET's recommendations are based on many hours of testing, research, and comparison shopping. We gather data from the best available sources, including vendor and retailer listings as well as other relevant and independent reviews sites. And we pore over customer reviews to find out what matters to real people who already own and use the products and services we're assessing.

When you click through from our site to a retailer and buy a product or service, we may earn affiliate commissions. This helps support our work, but does not affect what we cover or how, and it does not affect the price you pay. Neither ZDNET nor the author are compensated for these independent reviews. Indeed, we follow strict guidelines that ensure our editorial content is never influenced by advertisers.

ZDNET's editorial team writes on behalf of you, our reader. Our goal is to deliver the most accurate information and the most knowledgeable advice possible in order to help you make smarter buying decisions on tech gear and a wide array of products and services. Our editors thoroughly review and fact-check every article to ensure that our content meets the highest standards. If we have made an error or published misleading information, we will correct or clarify the article. If you see inaccuracies in our content, please report the mistake via this form.

It's almost 2025, and if you're using throwaway batteries, it's time to make the switch to rechargeable batteries. Not only will this change save you serious cash, but it will also make a massive dent on the ever-increasing pile of e-waste we produce.

However, remember that not all rechargeable batteries are created equal. The market is flooded with a dizzying array of options, making it a real challenge to separate the gems from the duds. But fear not, because ZDNET's got your back. I've scoured the depths of the battery universe to bring you the crème de la crème of rechargeable batteries, allowing you to make an informed choice and ensure you get the best performance and value for your hard-earned money.

So, when you need to stock up on batteries, we recommend getting one of our top picks. Our best overall rechargeable battery choice is the Panasonic Pro rechargeable battery due to its high capacity, variety of battery types, and excellent product quality.

Rechargeable lithium battery

The following rechargeable batteries are all top-notch and available in AA and AAA models. Keep reading to discover our favorite rechargeable batteries, including affordable bulk packs and convenient USB charging options.

The Panasonic Eneloop Pro rechargeable battery pack is the perfect starter kit for those in need of rechargeable batteries. Not only are they some of the best batteries available on the market, but this kit comes with AA, AAA, and C and D cell batteries and a charger at a really good price.✂;

The AA and AAA rechargeable batteries are pre-charged at the factory using solar power and maintain up to 70% of their charge after 10 years (when not in use).
