Rechargeable portable power home depot

ZDNET's recommendations are based on many hours of testing, research, and comparison shopping. We gather data from the best available sources, including vendor and retailer listings as well as other relevant and independent reviews sites. And we pore over customer reviews to find out what matters to real people who already own and use the products and services we're assessing.

When you click through from our site to a retailer and buy a product or service, we may earn affiliate commissions. This helps support our work, but does not affect what we cover or how, and it does not affect the price you pay. Neither ZDNET nor the author are compensated for these independent reviews. Indeed, we follow strict guidelines that ensure our editorial content is never influenced by advertisers.

ZDNET's editorial team writes on behalf of you, our reader. Our goal is to deliver the most accurate information and the most knowledgeable advice possible in order to help you make smarter buying decisions on tech gear and a wide array of products and services. Our editors thoroughly review and fact-check every article to ensure that our content meets the highest standards. If we have made an error or published misleading information, we will correct or clarify the article. If you see inaccuracies in our content, please report the mistake via this form.

Put those smelly, noisy, and potentially hazardous gasoline generators away and step into the 21st century with a sleek, battery-powered power station. These modern marvels are not only quiet and odor-free but also spring to life with just the press of a button. Whether you need something small and affordable or a powerhouse unit, there's a size and price range for everyone. Plus, they can be recharged using multiple power sources -- from your regular AC mains to eco-friendly solar energy -- and they typically last for years with minimal fuss.

With so many power stations hitting the market lately, picking the perfect one can feel like searching for a needle in a haystack. The sheer variety can be overwhelming, especially since prices range from budget-friendly to high-end models that cost thousands. And don't worry -- there are plenty of fantastic options that won't break the bank.

Also: How I used this portable power station to bring electricity to a caveman

Over the past few years, I've tested over 100 different portable power stations to find out which ones truly stand out. My top pick right now is the Jackery Solar Generator Kit 4000. In my testing, I found that this massive powerhouse holds an enormous amount of energy and can power your home for up to two weeks.

Jackery, a familiar name in the power station game for over a decade now, has a new power station called the

Explorer 2000 Plus, and this thing is a total game changer. You can scale it up from a single unit that's good for a day or two of camping to an array of batteries and solar panels that can power your home for two weeks.

You read that right: two weeks.

But you might notice that something is sitting atop my Explorer 2000 Plus. That's an add-on PackPlus E2000 Plus battery pack that adds an additional 2042.8 Wh of electrical storage capacity to the system. A single PackPlus E2000 Plus weighs in at 41.9 lbs (19 kg), so the two units combined come in at over 100 lbs (46.9 kg). That's quite a lot of weight, but in my experience everything slots together well and the unit is surprisingly portable.

This is a really big setup, so while it's not for everyone, it without a doubt represents the ultimate in portable power storage.

The reviews of this setup from buyers on Amazon reflect my feelings -- that this is a solid, well-made system that delivers on the marketing claims it makes.
