

Reduced carbon emissions ottawa

Reduced carbon emissions ottawa

Every year the City tracks the amount of greenhouse gas emissions produced by activities within Ottawa's boundaries and from municipal operations. Everyday activities such as heating our homes, moving around the city and treating our solid waste and wastewater can all contribute to greenhouse gas emissions.

The City undertakes two types of greenhouse gas emission inventories:

2020 community greenhouse gas emissions by sector:

2020 community greenhouse gas emissions by source:

2020 corporate greenhouse gas emissions by sector:

2020 corporate greenhouse gas emissions by source:

Read more about Ottawa's greenhouse gas emission inventories:

The Climate Change Master Plan is the City's overarching framework to reduce greenhouse gas emissions and respond to the current and future effects of climate change.

The plan aims to take unprecedented collective action to transition Ottawa into a clean, renewable and resilient city by 2050. City Council has adopted short, mid, and long-term greenhouse gas reduction targets based on 2012 levels:

The Climate Change Master Plan is guided by the following principles:

The Climate Change Master Plan identifies eight priority actions for the next five years (2020-2025):

Staff provide an annual status update on corporate and community greenhouse gas emissions, progress towards the targets and the eight priority actions to the Standing Committee on Environmental Protection, Water and Waste Management.
