Renewable energy growth canberra

Canberra's Energy Innovation Fund is driving the long-term development of the ...

Canberra has a strong and vibrant renewable energy innovation and start up culture. The ACT is working towards a net-zero emissions target by 2045. We achieved our 100% renewable electricity target in 2020. Yet there is more to do, and we need your help.

As Canberra transitions to net-zero, funding is available to support energy transition innovation for a brighter future. Applications for the Energy Innovation Fund (the Fund) grants program are now open.

Canberra's Energy Innovation Fund is driving the long-term development of the ACT's industries and jobs that support the energy transition. Formerly known as the "Renewable Energy Innovation Fund" or the "REIF", the Fund has invested \$12 million since 2016 and has been instrumental to the growth of a vibrant renewable energy sector in the ACT.

An additional \$19 million was committed to the Fund following the fifth round of the ACT renewables auction (which help maintain the ACT's 100% renewable electricity achievement). This additional funding will help develop innovative, emerging energy technologies and solutions to support the net zero transformation.

Our aim is to achieve our shared vision of Canberra as a place of opportunity for clean energy research, innovation and investment.

We want new business models and innovation to solve clean energy challenges and accelerate the uptake of clean energy initiatives.

We're responding to climate change as an economic opportunity. The net zero transition represents the greatest commercial opportunity of our time. This program is designed to attract investment in the clean energy sector and support jobs in the ACT.

As part of the Energy Innovation Fund, the ACT Government facilitates a grants program to offer flexible, early-stage funding for energy innovation projects, initiatives and research. The grants support a broad range of new and emerging technologies and ventures. These have the potential to support the delivery of the energy vision of the future.

The grants also support the development of the ACT as an export-oriented hub for energy transition innovation and investment.

Renewable energy growth canberra

This grant will provide up to \$10 million in investment over five years in flexible, early-stage funding for a broad range of new and emerging technologies and ventures that support the energy transition. This grant is open all year round, so you can apply at any time.

The Technology Demonstration Grant is targeted at businesses.
