Climate Education - Home - Ridgeblade

Microgen wind turbine for residential and commercial roofs (flat and pitched roofs) ...

The RB1 is the smaller, domestic version of the RidgeBlade(R) and has been designed to produce electricity in a wide range of wind conditions (including low wind speeds) whilst maintaining the lowest visual impact. Suitable for the majority of installation locations, including urban houses as well as environmentally sensitive sites such as National Parks and rural locations.

RidgeBlade(R) relies on a network of Accredited Partners to distribute and install all of our turbine systems. Find your nearest Accredited Partner or how to join our network.

The RB1 Residential is a compact, lightweight and quiet wind turbine ideal for residential applications.

The RB2 Commercial is a modular, high output and low profile wind turbine ideal for commercial applications.

The Hybrid Solar Units have all of the benefits of the base RidgeBlade(R) turbines, with the added output of solar PV systems.
