

Retail store energy storage jakarta

Applus+ through Enertis -its solar and energy storage specialist- provides a wide range of consulting and engineering solutions in energy storage, including testing, battery storage regulations assessment, and maintenance services. These support our clients in identifying the most suitable energy storage solutions and in making informed decisions for their assets by providing analysis, design, programming, modeling, and monitoring services.

We have been in the energy storage market since 2018 and have broad experience in energy projects worldwide.

Energy storage is one of the key elements of the transition toward a sustainable energy model. It provides flexibility to the electricity system because of its ability to guarantee a continuous energy supply in response to variations in energy generation or consumption, and it contributes to the efficient management of electricity networks.

The main energy storage technologies include batteries, thermal energy storage, mechanical energy storage, hydrogen energy storage, and pumped hydropower. A combination of all these technologies will contribute to increasing efficiency in energy management and consumption.

As the competitiveness of battery energy storage systems (BESS) for utility-scale renewable energy projects increases, the expansion of energy storage installations coupled with solar farms and wind projects is on the rise too. Also, incorporating energy storage systems into photovoltaic or wind projects makes it possible to increase the amount of energy injected at each access point and connection to the electricity grid.

Enertis Applus+ vast knowledge of the global energy storage industry and of the different and specific battery storage regulations defined in the main markets enables it to offer high-value technical storage consulting and engineering services to our clients.

We can support the full life cycle of energy storage or solar plus storage project, from initial development to construction and commissioning. Among the main services provided are:

As your partner in electrical building infrastructure for stationary retail, we guarantee the highest level of safety and energy efficiency. All our solutions and services - from switches and protection devices to energy measurement tools - are designed to support you in creating comfortable, functional and future-proof retail spaces.

We achieve this by providing total solutions for energy distribution, energy monitoring and energy management. This can include energy storage and charging

stations. What's more, if things don't go exactly as planned, you can always count on us to be by your side, whenever and when ever required. We have over 60 years' experience in helping customers expand their capabilities and work more effectively.

We have an enormous range of high-quality, integrated solutions for the retail sites of today and tomorrow.

Teaming up with Hager creates value for your business in multiple ways:

You can find everything you need from one source. We offer a true one-stop-shop solution: an extraordinarily broad range of products, backed by top-class service and support.
