American Rotary engineers the entire phase converter system to provide optimum performance. Our soft start generator and MicroSmart™ controller combine to make the most powerful and precise rotary phase converter on the market.

The focus of American Rotary, is always on innovative engineering, product development, and outstanding customer service. The results are great Wisconsin made phase converters that work flawlessly, provide unparalleled performance and are easy to install, all at an affordable price.

American Rotary's breakthrough design of the MicroSmart(TM) controller (AD, ADX, AUL, AMP, AI) allowed it to create the first true digitally controlled phase converter in the industry. Its digital accuracy provides an impressive ability to adapt to changing loads, sagging voltages and gives our phase converters the feel and performance you expect from high precision machines.
