News release from Sandia National Laboratories, March 3, 2016

ALBUQUERQUE, N.M. -- Sandia National Laboratories signed more than 5,000 U.S. partnership agreements in the past five years touching every state in the country, and has created an online map that brings them to life.

Pete Atherton, senior manager of industry partnerships at Sandia National Laboratories, goes over New Mexico information on the Partnerships National Reach map with software developer Lozanne Chavez. The map shows the numbers and types of Sandia partnership agreements across the country. (Photo by Randy Montoya) Click on the thumbnail for a high-resolution image.

"The map illustrates the amazing breadth of work Sandia does with industrial, university, government and lab partners around the United States," said Pete Atherton, senior manager of the labs' Industry Partnerships department.

The Partnerships National Reach map has been in development three years. Atherton said it came about because many people inside and outside Sandia didn't know the extent of the labs' collaborations. "People often ask how many industrial partners we work with and when I ask them to guess, I hear 20, 30, 40. Actually, in 2014 we worked with 830 unique industrial partners," he said. "The map takes it further to other types of partnerships. We wanted to tell the full Sandia story. This shows how much collaboration and technology transfer is really going on, and it doesn't include the labs' many global partners. That would be an

even bigger picture."
