Scania is at the forefront of the global shift to sustainable transport solutions. With production sites in Europe, South America and one underway in Asia, Scania manufactures and offers sustainable solutions of trucks and buses for heavy transport applications, combined with an extensive product related service offering. Scania is also a leading provider of industrial and marine engines.

The company is also a leader in digitally networked services for commercial vehicles and is driving the development of autonomous trucks. Scania already offers many options for alternative or electric drives. The product range is completed by a wide spectrum of supplementary sales and service support.

With vehicle connectivity, Scania enables its customers to analyze the performance data of their trucks and buses – for example, to improve fuel consumption and optimize overall logistics.

Scania also finances, insures and leases commercial vehicles. This allows customers to concentrate on their core business.

With its broad portfolio, Scania is now one of the world's most important providers of sustainable transport solutions.

Throughout its history, Scania has developed into one of the world's leading manufacturers of heavy trucks and buses through pioneering innovation. Increasingly important today are connected services, renewable fuels and electrification.
