Warranty Information - Portable EMP-protected Solar Power Systems

The entire system can be set up in 30 seconds or less! The sturdy construction ...

Living off-grid simply means that your home is not connected to the local power utility grid. Instead, you can have a self-contained solar energy system right on your property that produces enough energy to power everything that you need.

Off-grid solar power systems for homes use batteries to store the energy so that you can have power continuously, not just when the sun is shining on your solar panels.

An off-grid solar energy system makes sense in several scenarios.

If that's the case for your home or cabin, it can be much simpler and vastly cheaper to install an off-grid solar energy system. Especially if you have a cabin that you use only occasionally for hunting or vacationing, an off-grid system makes much more sense than paying tons of money to run lines to the power grid.

Some homeowners will install an off-grid solar system on their detached buildings despite having easy access to utility power lines. This gives some part of your property continuous electric for you and your family (or business) to keep essentials running.

Another reason to switch to an off-grid solar system is to live a highly eco-conscious lifestyle. Going 100% off-grid is not just an investment, but also a lifestyle change.
