

# Simple solar power system diagram

## Simple solar power system diagram

In this guide, we will be using the equipment that is listed below. This equipment list includes everything you'll need for a simple 100 watt to 200 watt solar power system. You can also use this guide to get a better understanding of solar power systems for building larger systems or different variations. When completed, you will be able to charge a battery to power your devices.

### Solar Panel System DiagramTechReviewer

Solar panels are made of many solar cells (photovoltaic cells), most often made from crystalline silicon. These cells take in energy from the sun's rays, converted through the semiconductor, creating an electric field that transfers voltage and current. Solar panels connect to the charge controller to regulate the voltage and current produced by the panel.

Charge controllers are used to regulate the voltage and current coming from the solar panels to prevent overcharging your battery.

Batteries are used for storing the energy produced by your solar panels. The battery is wired between your power inverter and the charge controller. Never connect your power inverter and the charge controller directly without a battery between the two.

Power inverters are used to convert the battery's power (DC - direct current) into electricity used for powering your devices (AC - alternating current). Power inverters have an outlet on the device.

Fuses are used to protect the wiring and devices from overcurrent. Fuses usually go on the closest point of the positive connection from your battery to the power inverter. You can also put fuses elsewhere in your system for protection, like an MC4 fuse for going between your solar panel and charge controller. You can find MC4 Fuses on Amazon .

Branch connectors are used to merge the cables coming from multiple solar panels to your charge controller.

Here's a list of our recommended equipment needed for a complete solar power system setup. If you want a different setup variation, see our other articles to help with determining what equipment you will need based on your needs.

If this list doesn't include what you are looking for, you can also find more of our recommended solar panel equipment below.

Solar Starter Kit: Renogy 100W 12V Monocrystalline Solar Starter Kit With 20A Charge Controller on
