Home wind turbine kits are usually expensive, and many affordable ones are often unreliable. So, you can spend several thousand dollars for a marginal boost in power or shop for a few reliable small wind turbine kits that don't break the bank.

The top small wind turbine kits that don't break the bank include models from Dyna-Living, Pikasola, and Hilitand. Tumo-Int and Primus turbine kits are costlier in comparison but not exorbitantly. However, these small wind turbines have a limited power generation capacity.

Recently, vertical-axis wind turbines have made a splash in the market, but their efficacy, efficiency, return on investment, and practicality are yet to be proven.

So, this list only consists of horizontal axis wind turbine kits that are reliable and affordable. Read on for our recommendations.

The YaeMarine Wind Turbine Generator Kit (400W, 24V) is an efficient and effective option if you only have \$200 to spare. YaeMarine's windmill generator has a turbine featuring five nylon fiber blades that is rated for 400W with a max wattage of 430W.

We should note that the operating temperatures of -40°F to 176°F (-4.4°C to 80°C) are usually a norm for small wind turbine generator kits, and YaeMarine is no exception.

The Dyna-Living Wind Turbine Generator Kit has five blades and a charge controller. Also, you get a user manual and all the mounting accessories but not the mast or pole.

Meanwhile, the Dyna-Living 500W 24V AC Generator Kit includes the turbine, charge controller, and screws. This small wind turbine kit doesn't have the mast or pole either.

However, most small to medium home wind turbine kits at these prices won't include a mast because the onsite installations aren't the same as those for higher-priced models.

The reason we lumped these models together is that their specifications are pretty similar, including:

The models within this price range are attractive because two credible brands have home wind turbine kits offering significantly different rated power outputs. Also, Pikasola's 12V, 400W wind turbine kit has a marginally higher price than Hilitand's 24V, 800W generator.
