Honeywell Smart Power is managed by our City Suite Command & Control platform to create an end-to-end, interoperable, AI software and renewable-energy-storage platform that integrates microgrids and critical city systems to provide a common operating picture, as well as automate and optimize city operations.

Our solution gives cities and communities access to:

Our Smart Power solutions integrated with Honeywell Buildings Sustainability Manager is your operating system for energy resilience in buildings and multisite portfolios. Monitor power and adapt it as needed, manually and automatically.

Built on a foundation of supply, control and optimization, Honeywell Smart Power for Buildings can help building administrators, and sustainability or energy managers to:

With extreme weather events on the rise, one small town in Florida showed the world the benefits of being a resilient and sustainable community.

The Honeywell energy storage battery focuses on long-duration energy storage applications above 4 hours of discharge, such as capacity peak power, energy shifting and microgrid. It pairs well with renewable generation sources such as wind and solar, thus facilitating the carbon neutral transition.

In an era marked by rapid technological advancement and growing environmental concerns, the quest for energy efficiency has become more critical than ever. At the forefront of this movement are smart power management systems (SPMS), which are revolutionizing how we monitor, control, and optimize energy use across various sectors. These systems leverage cutting-edge technology to enhance energy efficiency, reduce costs, and support sustainability goals. This article explores the future trends in smart power management systems and their role in shaping a more energy-efficient future.
