This definition may differ from Encyclopedia Britannica's printed version since it was consulted from its webpage. Available online: <https://global.britannica.com/science>. Furthermore, the specific definition was taken from the encyclopedia's scientific approach as stated in the web link.

This research was possible thanks to "Consejo Nacional de Ciencia y Tecnología" funding, through scholarship #346887. Work was done with support from Transdisciplinary Ph.D. program in Scientific and Technological Development for Society within "Centro de Investigación y de Estudios Avanzados" facilities. Special thanks to "Sociedad Mexicana del Hidrógeno" and XV International Congress of the Mexican Hydrogen Society for the provided fellowship.

Title: Energy Efficiency and Renewable Energy - Large Scale Solar Energy in Mexico
Commissioned by: German Federal Ministry for Economic Cooperation and Development (BMZ)
Country: Mexico
Lead executing agency: Mexican Secretariat of Energy (SENER); Mexican Secretariat of Foreign Affairs
Overall term: 2015 to 2020

Over 90 per cent of Mexico's energy supply is currently dependent on fossil fuels. The recently enacted energy reform and Energy Transition Law have established a crucial foundation for increasing the share of renewable energies in the energy supply. Additionally, the country has set ambitious targets for expanding the use of clean energies within the framework of international climate negotiations.
