Solar energy storage united kingdom

government lights the way to our renewable energy future by: 1. Embracing UK Solar. ...

Solar Energy UK represents over 400+ member companies operating in the UK energy sector and beyond.

Solar energy's exceptional synergies with energy storage, electric vehicles and smart grids means the industry works on the frontline of technology and system change to deliver net zero carbon emissions. Our incisive research, policy development and influence shapes policy and regulation, and drives market growth.

In partnership with key players across the value-chain, Solar Energy UK is working to five-fold increase the UK solar capacity to 70GW by 2035.

Solar technologies adorn one in every 20 buildings in the UK, with solutions available for all sizes, from garden sheds to commercial estates.

Well-managed solar farms provide clean power and a haven for local wildlife, including endangered species of plants, insects and birds.

Installing battery storage and intelligent energy controls in 4.4million homes would provide enough flexibility to completely flatten spikes in electricity demand.

Cleve Hill Solar Project to support over 2,300 jobs, generate GBP 148m of local socio-economic benefits and progress the UK towards its Net Zero targets

London – 25 April 2023 - Quinbrook Infrastructure Partners ("Quinbrook"), a specialist global investment manager focused exclusively on the infrastructure needed for the energy transition, announces construction start of Cleve Hill, the UK's largest consented solar (373 MW) + battery storage (>150 MW) project. Located in Kent, this renewable power project is expected to be fully completed by the end of 2024.

High energy prices, geopolitical instability and the UK's ambitious Net Zero goals are bringing into focus the critical need to accelerate the building of the next generation of energy transition infrastructure in the UK, In our view, large scale solar + battery storage projects are key to achieving the decarbonisation imperatives of the energy transition the world over and we are doing our best to create a blueprint for more projects to come here in the UK. Just as importantly, we are committed to doing this in a way that is truly impactful in supporting jobs and delivering a range of tangible benefits to the local community

The Cleve Hill solar project was granted development consent in May 2020 by the UK Department for Business, Energy & Industrial Strategy (BEIS) and was the first of its kind to be approved as a Nationally

Solar energy storage united kingdom

Significant Infrastructure Project. Cleve Hill is expected to generate enough renewable power each year to meet the power needs of over 100,000 UK homes and help reduce carbon emissions by 164,450 tonnes every year. The huge scale of the project is set to provide a meaningful contribution to improving energy security for the United Kingdom and further decarbonise the power grid, helping to progress the country's journey to Net Zero.

Cleve Hill is expected to support over 2,300 direct and indirect jobs during the project's lifetime and generate more than GBP 148 million in local socio-economic benefits. Creating opportunities for local companies to be involved in the construction and operations supply chain is a Quinbrook priority, coupled with the ability for local residents to access employment opportunities associated with construction and operation. Research organisations are also encouraged to access information concerning the project to enable technical research and innovation in the renewable energy sector as a whole.
