Get up to 3 quotes for solar, batteries or EV chargers

At 4 o'clock last Thursday, SolarEdge launched their home battery with an online event.

The next day, they held another launch for people who couldn't make it to the first one. I attended both and paid 55% attention each time, so I want you to know I gave this article 110%.

The battery can be added to existing solar systems with compatible SolarEdge inverters. SolarEdge says they'll have a special offer that will allow SolarEdge owners without an Energy Hub inverter to upgrade to one at a reduced price if they buy the battery. This will also apply if people have an existing Solar Hub inverter and want to get a larger capacity one when they have the battery installed.

Because it's DC Coupled, there's no internal battery inverter. This can be a big advantage in areas where battery inverter capacity counts towards the total solar inverter capacity permitted by the local DNSP (electricity network).

Here are some technical specs I pulled from its datasheet:

It says its 'Peak Roundtrip Efficiency' is greater than 94.5%. I put a red line under the word 'Peak' because it's not the same as the actual roundtrip efficiency, which is around 93.3%.
