SunPower is a powerhouse in the solar panel installation industry. Those interested in high-efficiency solar panels on their home will likely recognize the solar brand name and its quality panels and batteries.

In this guide, we will take a look at SunPower and everything the company offers so customers can evaluate whether the solar provider is the right choice for their solar installation needs.

SunPower is a leading solar, storage and energy services provider based in Silicon Valley, CA. The company has acquired over 1,000 patents for its solar technology since it set up shop nearly 40 years ago.

We scored SunPower 4.8 out of 5 stars, and the company topped our list of best solar companies of 2024 thanks to its top-of-the-line products. The company has some of the highest-rated solar panels and batteries on the market. It offers four solar power lines, each boasting a better-than-average efficiency rating of 20% or higher.

With service in all 50 states, SunPower is one of the largest solar installation companies in the country. Larger service providers come with widespread availability, but they also come with downsides, like variable customer service experiences.

Customers who aren't as concerned about price and customer service but want some of the best solar panels on the market should consider SunPower.

SunPower's efficient solar panels generate power while shrinking your carbon footprint and saving you money on your electricity bills.

SunPower has several solar financing options to allow homeowners to go solar without a down payment. The company offers solar purchases, loans and leases. Plus, SunPower advertises low monthly payments, high credit limits and a quick application process for its financing options.

SunPower offers home solar systems, solar batteries and electric vehicle (EV) charger installation services. Homeowners can also use the company's app to monitor system performance.

Because the company is so widespread, its in-house installers aren't always available. The company uses a

combination of in-house installers and subcontractors to install solar panels.
