The Energy Storage System, developed by Su-vastika, is a rechargeable battery ...

Realizing the emerging need for an Energy Storage System in our country, Su-vastika, one of India's most promising power storage and power startup companies, is leading the charge and transforming the power backup storage sector through its technology, enthusiasm, and innovation. Relying on its cutting-edge renewable power conversion technology and industry-leading battery technology, Su-vastika focuses on integrated energy storage system solutions.[https://en.wikipedia/wiki/Energy\\_storage](https://en.wikipedia/wiki/Energy_storage)

Due to his efforts, India was finally introduced to Energy Storage System or ESS. The Energy Storage System, developed by Su-vastika, is a rechargeable battery system that stores energy from the electric grid or any renewable energy source and provides that energy back when needed to create a more resilient energy infrastructure and provide cost savings to consumers and utilities. Furthermore, these ensure system reliability and stability by responding rapidly to power fluctuations. The primary component of an ESS is a LiFePO<sub>4</sub>-based Lithium-ion battery which can run all heavy loads that a heavy generator can run, with higher efficiency, cost saving and safe for the environment.

The superior static switches used in this patent technology by Su-vastika's ESS system minimize switching time to just 2 to 5 milliseconds, quick enough to prevent a computer and most sensitive equipment from resetting. This makes it an ideal alternative to generators and lead-acid battery-based home UPS/inverters. Providing a never seen before high energy storage capabilities, faster switch time, negligible maintenance costs, zero pollution, long-lasting batteries for lifelong usage, and an insane amount of power ideal for large commercial and industrial spaces, ESS is a solution that is finally taking the industry away from non-renewable energy-based solutions such as diesel towards a solution that is based on renewable source of energy- the sun.

Su-vastika has also received Technology Patent for the said technology, proving their credibility.

A strong commitment to changing the energy storage market will require a switch to renewable energy sources, efficient electrification, grid flexibility, usable EV charging and the development of Li-ion battery

# Suva energy storage solutions

storage technologies. This will lead to significant growth in society and the economy.

Increased energy efficiency: BESS can store excess energy generated by renewable sources, such as solar and wind, and then use that energy when needed. This can help to reduce the amount of energy that is wasted, and it can also help to improve the efficiency of the overall energy system. <https://suvastika/bess-battery-energy-storage-solutions/>

High Frequency-based Online UPS is made through the circuitry where triple conversion technology wastes a lot of energy, and the battery constantly remains in the picture, reducing the battery life. At the same time, the BESS passes the power through the isolation transformer, which gives the isolation to the Computers and transfers to the battery mode when the Power outage happens. <https://suvastika/bess-battery-energy-storage-solutions/>
