

Tallinn commercial microgrids

ICDCM is a flagship conference of the IEEE Power Electronics Society (PELS) devoted to the dissemination of new ideas, research and work in progress within the rapidly growing fields of DC microgrids. It will bring together researchers, engineers and students from academia, government and industry for an interactive discussion on the latest advances in DC Grid Technologies and Applications. This conference is organized by PEELS TC1: Control and Modeling of Power Electronics. The objectives of the conference are to provide high quality research and professional interactions between industry and academia for the advancement of science, technology and fellowship. The main features of the conference include Keynote Speeches, Tutorials, Regular and Special Sessions.

7th International Conference on DC Microgrids will focus on DC Grid Technologies and Applications.

The organizing committee solicits digests limited to two pages in the standard two-column IEEE format.

Follow the latest deadlines!

Get acquainted with the conference program.

Special Session proposals are solicited covering special topics in all emerging research areas of DC Technologies and Applications.

The ICDCM organizing committee invites proposals for tutorials that are of value to practicing engineers and researchers with an emphasis on solutions to practical problems.

Find out what world-leading researchers will deliver keynote speeches at the conference and what topics will be covered.

Meet our sponsors presenting their products.

Find out special rates in the venue hotel and possible alternative accommodations.

Our contact information.

The work includes the research and development of power supply systems and smart grids for industry and service sectors and households aimed at improving the efficiency, reliability and flexibility of electrical installations.
