A Powerwall offers independence from your energy bills, but only if you use the Tesla App and customise it to meet your unique energy needs and goals. Don't worry, it's free with every Powerwall.

Where do you download it? How do you set it up? Is there an installation tour?

At Penrith Solar Centre, we install Powerwalls all day, every day. When we're on-site at a customer's home, a team member will take some time to help you set up your new Tesla Powerwall. They will talk you through the following steps and considerations, showing you how to get the most out of your Powerwall.

By the end of this article, you'll have a roadmap for what to expect when a member of our installation crew works with you to set up your new Powerwall.

Configuring the Powerwall correctly is extremely important. Don't worry, we do that for you. It's important we make sure it operates smoothly and efficiently.

What are Firmware Updates?

What are System Settings?

Key Settings to Configure:

Internet Connection

Please note: Tesla's website uses language referring to internet connections over Wi-Fi. This is the manufacturer's preference, especially because 3G networks are being phased out and the first-generation Tesla Gateways are losing cellular connectivity.
