As subject matter experts, we provide only objective information. We design every article to provide you with deeply-researched, factual, useful information so that you can make informed home electrification and financial decisions. We have:

Sourced the majority of our data from hundreds of thousands of quotes through our own marketplace.

Incorporated third-party data and information from primary sources, government agencies, educational institutions, peer-reviewed research, or well-researched nonprofit organizations.

Built our own database and rating system for solar equipment, including solar panels, inverters, and batteries.

We won't charge you anything to get quotes through our marketplace. Instead, installers and other service providers pay us a small fee to participate after we vet them for reliability and suitability. To learn more, read about how we make money, our Dispute Resolution Service, and our Editorial Guidelines.

You've probably heard of the Tesla Solar Roof - and you may even have considered it over standard solar panels. The Solar Roof integrates traditional roof shingles with solar panel technology to create a sleek solar system that's both aesthetically pleasing and a generator of clean energy. But Tesla Solar Roofs come at a premium cost and aren't the best option for everyone. In this article, we'll help you decide if a Tesla Solar Roof or solar panels are right for you.

Tesla's solar roof tiles are likely about 20 to 30 percent less efficient than standard solar panels.

Tesla Solar Roofs are becoming less widely available across the country - even if you live in an area where it's available, you may see long delays in the installation process or even have your project canceled.

A Tesla Solar Roof usually costs more than traditional solar panels and may be as much as 75 percent more expensive.

Tesla's Solar Roof may be worth exploring if you have a simple, small roof that needs replacing, want to install a battery, or are set on its aesthetics.

Explore your home solar options on the EnergySage Marketplace.

The Tesla Solar Roof is a building-integrated photovoltaic (BIPV) product that combines the functionality of solar panels with roof shingles. While Tesla is primarily known for their electric vehicles (EVs), the company entered the solar space when CEO Elon Musk led an acquisition of SolarCity in 2016. The glass solar and
