How Much Does it Cost to Install a Tesla Supercharger Station?

480?2012?2020118,2,016,2 ?1042,559,415?20221226,1? ...

This calculator will help you calculate how much it costs to charge a Tesla. It doesn't matter where you are going to charge your car in your garage or at a network charging station.

The Supercharger Cost Calculator will allow you to select a variety of sockets and determine what type of charger you will be charging with (Level 1 or 2). The calculator will allow you to compare charging costs, and will answer the question of where it is more profitable to charge your Tesla at home or at charging station networks. From this it will become clear what is cheaper to charge an electric car with alternating current or direct current.

Cost per kilowatt of electricity varies from one state to the next. You can calculate the cost of charging by entering the area's cost per kilowatt into our calculator.

The price range is volatile, with spring 2020 being cheaper to fill up your car with regular gasoline than it is to charge it with Supercharger. However, this is no longer the case in the spring of 2022.

The price per gallon of gasoline in many states is still well below the national average. This makes it difficult to correct calculations. Texas is an example of this. The average price per gallon is 11% lower.

The Tesla Supercharger Cost Calculator will be useful both for current EV owners and for beginners who are going to buy a car.

You will be able to calculate the cost for the main models and their modifications:

Accurate cost estimations allow Tesla owners to budget effectively for their charging needs. By understanding the costs associated with different charging methods and locations, drivers can make informed decisions about when and where to charge their vehicles. This can lead to significant savings over time, especially for those who frequently use their Tesla for long-distance travel.

5 ways to make the most of your Tesla Supercharger

Superchargers are Tesla's version of Level II chargers but they charge Tesla cars at an accelerated rate which could take you up 200 miles within 30 minutes or less - compared to regular level II chargers.
