Thomas edison cause of death

Thomas edison cause of death

Born in Milan, Ohio, in 1847, Edison received little formal schooling, which was customary for most Americans at the time. He developed serious hearing problems at an early age thought to be the result of scarlet fever. Edison, however, believed it was the result of an incidentin which he was grabbed by the ears and lifted onto a moving train. Hisdisability motivated many of his inventions. At age 16, Edison found work as a telegraph operator and soon was devoting much of his energy and natural ingenuity toward improving the telegraph system itself. By 1869, he was pursuing invention full-time and in 1876 moved into a laboratory and machine shop in Menlo Park, New Jersey.

Edison"s experiments were guided by his remarkable intuition, but he also took care to employ assistants who provided the mathematical and technical expertise he lacked. At Menlo Park, Edison continued his work on the telegraph, and in 1877 he stumbled on one of his great inventions—the phonograph—while working on a way to record telephone communication. Public demonstrations of the phonograph made the Yankee inventor world famous, and he was dubbed the "Wizard of Menlo Park."

Although the discovery of a way to record and play back sound ensured him a place in the annals of history, it was just the first of several Edison creations that would transform late 19th-century life. Among other notable inventions, Edison and his assistants developed the first practical incandescent lightbulb in 1879, and a forerunner of the movie camera and projector in the late 1880s. In 1887, he opened the world"s first industrial research laboratory at West Orange, where he employed dozens of workers to systematically investigate a given subject.

Perhaps his greatest contribution to the modern industrial world came from his work in electricity. He developed a complete electrical distribution system for light and power, set up the world"s first power plant in New York City, and invented the alkaline battery, the first electric railroad, and a host of other inventions that laid the basis for the modern electric world. He continued to work into his 80s and acquired 1,093 patents in his lifetime. He died at his home in New Jersey on October 18, 1931.

HISTORY works with a wide range of writers and editors to create accurate and informative content. All articles are regularly reviewed and updated by the HISTORY team. Articles with the "HISTORY Editors" byline have been written or edited by the HISTORY editors, including Amanda Onion, Missy Sullivan, Matt Mullen and Christian Zapata.

Thomas edison cause of death

Thomas Edison was born in 1847 in Milan, Ohio, but grew up in Port Huron, Michigan, after the family moved there in 1854.[8] He was the seventh and last child of Samuel Ogden Edison Jr. (1804-1896, born in Marshalltown, Nova Scotia) and Nancy Matthews Elliott (1810-1871, born in Chenango County, New York).[9][10] His patrilineal family line was Dutch by way of New Jersey;[11] the surname had originally been "Edeson".[12]

His great-grandfather, loyalist John Edeson, fled New Jersey for Nova Scotia in 1784. The family moved to Middlesex County, Upper Canada, around 1811, and his grandfather, Capt. Samuel Edison Sr. served with the 1st Middlesex Militia during the War of 1812. His father, Samuel Edison Jr. moved to Vienna, Ontario, and fled to Ohio after his involvement in the Rebellion of 1837.[13]

Edison was taught reading, writing, and arithmetic by his mother, a former school teacher. He attended school for only a few months. However, one biographer described him as a very curious child who learned most things by reading on his own.[14] As a child, he became fascinated with technology and spent hours working on experiments at home.[15]

It is known that early in his career he enrolled in a chemistry course at The Cooper Union for the Advancement of Science and Art to support his work on a new telegraphy system with Charles Batchelor. This have been his only enrollment in courses institution of higher appears at an learning.[18][19]

Edison obtained the exclusive right to sell newspapers on the road, and, with the aid of four assistants, he set in type and printed the Grand Trunk Herald, which he sold with his other papers.[25] This began Edison"s long streak of entrepreneurial ventures, as he discovered his talents as a businessman. Ultimately, his entrepreneurship was central to the formation of some 14 companies, including General Electric, formerly one of the largest publicly traded companies in the world.[26][27]
